**SERVICE CENTRE – „Screening Technology“**

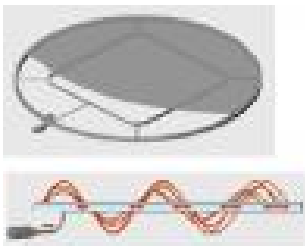

We write SERVICE in capital letters. Our SERVICE centre offers you the following:

- Competitive spare parts and remeshing for all circular screeners
- Screener overhauling and optimisation
- Electronic balancing to minimize vibrations to building
- Maintenance contract for all your screening machines
- 30 years of experience - perfect solutions to your screening problems and applications
- Favorable prices and short delivery times

Consistent availability and reliability is extremely important nowadays in order to remain permanently competitive

GKM offers a full package care for your screening machines.

You may concentrate on the essential things of your business. Call us now!

**Ultrasonic – „The clean screening method“**

We proudly present our new ultimate ultrasonic anti blinding system.

**This ultrasonic method is ways different because it is not operating with continuous resonance vibrations.**

The electronically controlled generator provides a permanently changing frequency through the transducer which is connected to a transducer ring on which the screen mesh is glued. This simple and patented system avoids the influence of permanently high resonance modes.

They could be the reason for high temperatures (hot spots) and high stress to the transducer ring, its fixations to the screen frame and the mesh cloth.
